
Difference between I.E, Firefox, Chrome

Posted by Roelie - 2013/04/04 20:19

I have made a template for Joomla and used the Ari Slider for the header.
Now I see that there is a big difference between I.E., Firefox and Chrome.
What can I do to solve that problem?

Hello,

What difference do you mean? Where we can see the problem?

Regards,
ARI Soft

Hello,

You can see the difference on www.duikteamdewatergeuzen.nl
I mostly work with Firefox and there the slider is very good. But when I'm looking with I.E. or Chrome the slider is much too big.

Set "Width" parameter in module settings to correct value (set it to 1000).
