
ARI Image Slider - Image display problem

Posted by rkravi - 2013/04/05 00:42

Hi,

Ref: my site: <http://www.raviandviji.com/wps/>

I like the Image Slider program it works well except for the following:

1. The slideshow starts with a "small section" of the next image on the left. Then the small section keeps growing. You can see it on the site.
2. How do I control the height of the light background behind the slideshow?

I appreciate any help. Thank you.

Ravi

Hello,

It is not "ARI Image SlideShow" extension on your site.

Regards,
ARI Soft
