

Dots under slider

Posted by Icorva - 2013/04/07 01:44

I have multiple dots under the slider. This appears to be loading images. How to remove the dots? www.icorva.com

Hello,

These are navigation buttons and they are shown under menu items due to site template styles. If you want to hide navigation buttons, set "Show slides navigation" parameter to "No" in module settings or add the following CSS rule to extend height of container element which is used for selected module position:

```
BODY .art-header
{
  height: 245px;
}
```

Great! Thanks for the fast reply. Question will the Ari image slide show do the same operations?

You use "ARI Image Slider".

My mistake image slide show.

One more question, this app adds a bit of weight to the website loading. Can the pictures be turned off until the site loads?

You can set "Load method" parameter to "On load" in module settings.
