Image slider overlapping main menu module

Posted by Maiordomus - 2013/04/23 16:13

_____

Dear ARIsoft!
Your slider is amazing, I'm using it on many sites without any problem.
However, on http://pnlc.hu/ I installed it instead of the original slider given with the template, and now ARI Image slider stops the Main menu module working all the time, usually when I click to the second slide. It often stops also while just browsing the site and it arrives to the 2nd slide. I checked the dead/stopped menu with Firebug, and it shows that in that position the image slider javascript running, overlapping 4-5 lines of the menu module.
http://www.ari-soft.com/images/fbfiles/images/overlapping.jpg
How and where could I fix it?
Thanks in advance,
Maiordomus

_____

Hello,

Upgrade the module to the latest version and clean browser's cache.

Regards,
ARI Soft
