
odd mouseover behavior

Posted by snafu - 2013/05/02 19:45

Hi this is strange, slider works well, however I have a module with a link under the slider and after a few seconds the link in the module does not respond.

I turned on 'show nav buttons on mouseover' and I can see the problem, the mouse over is reacting correctly over the image but also for another 300 or so pixels down the page.

As i said this is not permanent but annoying and seems to occur randomly sometimes after a couple of images and sometimes after maybe 10 or more.

Best way to see this is to move the mouse around over the top left module position and watch the link, eventually (within a minute) the link will not hilite and the nav buttons will appear.

itsallaboutthemusic.co.uk

Thanks in advance for an otherwise wonderful free module.

Hello,

What browser do you use? We have tried to reproduce the problem in FireFox browser, but the slider and links work fine.

Regards,
ARI Soft

Hi Sorry, I updated the plugin since my post and it seems to have fixed the issue.

It was just such an odd intermittent error and was occurring in both safari and chrome. . .

thank you for you response. .

/terry
