Ari Image Slider never stops loading

Posted by AnaK - 2013/05/08 09:54

_____

Hello,

I installed the slider and entered relative paths in to the image path text area but the slider never stops loading. I use these settings for the images:

images/site/V1_a-1.jpg
images/site/V2_b-1.jpg
images/site/V3_a-1.jpg

I have more images in this folder that i don't want them displayed. just these 3. Also i set the number of images to 3. Here is the link of the site:
http://www.fames-project.com/

Best regards,
Ana

_____

Hello,

It is not "ARI Image Slider" issue. Open browser's error console and you will see it contains a lot of javascript errors which are not related to "ARI Image Slider", but prevent execution of "ARI Image Slider" javascript code.

At least enable jQuery loading in module settings and disable extension which removes jQuery library from your site.

Regards,
ARI Soft

_____

Hello,

Yes i found the problem. I used the plugin JHC-Optimize, after i disabled it it loaded just fine.

Thank you for your time and great support :)

Best regards,
Ana
