Image slideshow and responsive design

Posted by makispan - 2013/05/11 12:56
_____

I use image slide show for a static design website. Now that I redesign the site on responsive basis, I want to keep slide shows as it is. As Iâ€™ve seen the latest updates supports responsive.
What do I need to do with my existing slideshows and what should I expect to happen? When I have a 550px width slide in a 550px width slider, the slider responds to browser width but the image will keep the original size? Is there any example of implementation?

Hello,

Install the latest version of the extension and set "Responsive" parameter to "Yes" in module settings.

Regards,
ARI Soft
