
Loadposition and Loadmodule

Posted by soyjaz - 2013/05/16 09:09

Good morning,

I'm using the plugin loadmodule, which is a native one of J!3.1.

I accidentally made a mistake to the .ini of the slider, (forgot a .png in the section) so a link was missing, but everything else was working.

I found out and corrected this mistake. Since I did so, the link is obviously working, but I can't use anymore the pagination that is under the slideshow (little rounds) to navigate through slides.

Problem visible at : <http://www.test-bib.uvsq.fr/joomlanico/>

Thanks in advance,

sjz.

Hello,

What browser do you use? We have checked it in FireFox browser and navigation buttons work fine.

Regards,
ARI Soft

Oh well, I'm using Firefox 20.0.1 and indeed, they're working in the opposite way I thought they were.

Thanks for the answer :)

Regards,
sjz.
