_____

Hi Everybody

I have a problem on my website. all the images are loading very long. Earlier I used this module for larger images and there was no problem. Is the problem is on the server side?

http://cmsjuve.cba.pl/

Regards
Asmo

Hello,

This is a problem with an extension which is used on your site to show loading icon for non-loaded images. It changes images which are used by "ARI Image Slider".

Hi.
I have a very big delay when I try to load ari slider using a folder with 300 images for slideshow.
What do you mean by this answer
"This is a problem with an extension which is used on your site to show loading icon for non-loaded images. It changes images which are used by "ARI Image Slider"."
What should i check?
The link is
http://greekseashells.com/_c/index.php/slideshow/gastropoda.html
And please consider that it is very slow when it is used with 2mbps ADSL speed. Of course other slideshows work fine as Ari image slide works fine with less images. Could be the thumbnails?
I did a folder thumbs and I putted inside very small images for thumbs 100x70. I did the correct setting but it didn't change the speed.
Thanks.

Hello,

You can use a browser developer tool to see how much time is required to load images. For example you can use FireBug addon for FireFox browser and open "Net -> Images" tab.
