
2 Ari image sliders right next to each other

Posted by betjo - 2013/06/10 11:15

Dear forum,

First of all, thanks for making such an awesome extension.

I've got a question regarding Ari Image Slider in Joomla.

I want to use 2 different ari image sliders in one module.

But when I duplicate the Ari Image Slider module and put it in the same template location (both on position: 'top') I get the second slider under the first one, instead of having it next to each other without any margin.

Do you know a way to get my 2 sliders right next to each other? Or is this a question I need to ask on the Joomla forums instead of this one?

Thanks in advance!

PS: This is the website I'm talking about. You can see the problem I'm having there.

<http://troostdesign.com/trompenburg/>

I want them right next to each other without any borders, or margin.

The idea is that the first slider shows a black background with white letters and that the second slider shows pictures.

=====

Hello,

This question is related to site template styles, but try to add the following CSS rule:

```
#top .moduletable.left,  
#top .moduletable.right  
{  
  float: left;  
}
```

Regards,
ARI Soft
