
Error 404 with style.css

Posted by nino59 - 2013/06/12 09:07

Hi,

I installed module Ari Image slide. I choose the them "img" and my java console showed me that ariimage is loading a css which doesn't exist:

modules/mod_ariimageslider/mod_ariimageslider/js/themes/img/style.css

But everything works fine! Visitors don't see anything wrong.

I check this folder and it doesn't exist. Ariimage slide is calling a css file which doesn't exist. This make slower my website each time my homepage is loaded.

How can I fix that?

Thanks

Regards

Gauthier

Hello,

Set "Theme" parameter to "default" value.

If the problem still appears, provide a link to a page where we can see it.

This error 404 disappeared.

But now my slider doesn't look good like it was.

Is it possible to remove this line of code which call this non-existent style.css file for "ing" theme?

What doesn't look good? Send a link to a page where we can see the slider.

My slider looks good with theme img:

<http://yesifun.com/good.png>

My slider looks bad with theme default or other theme:

<http://yesifun.com/bad.png>

If you want to disable navigation buttons, set "Show slides navigation" parameter to "No" in module settings.

About gray background we can investigate the problem if you provide a link to a page where we can see the slider.
