
JFolder: :files: Path is not a folder.

Posted by manciukas - 2013/06/17 06:57

Hi,

I've got this error: JFolder: :files: Path is not a folder. And turns out the cause of it is this slider. My image path in module is images/slides/image1.jpg and every picture is in new line. While I was working on localhost everything was fine, it appeared just when I moved it on server.

How can I solve this problem?

Mantas

Hello,

If "Image path" parameter contains an empty line(s), delete them.

If it doesn't help, we can investigate the problem if you provide a link to a page where we can see it and a temporary access to your J! backend by email.

Regards,
ARI Soft
