
Image Slider loads distorted images

Posted by Roym - 2013/06/18 15:45

I have tried a few different Joomla slideshow programs and this seems the easiest by far. I've run into a situation where I set the container size to 807pxX605px which should scale down my images without any resolution issues (or I thought since it worked with other slideshow programs). But doing this makes my images fuzzy.

Any suggestions? It can be viewed temporarily at:

Hello,

Open module settings page and set "Use thumbnails" parameter to "No".

Tried that, now the page just continually tries to load the slideshow. What should be the next step?

Cleared the browser cache and it seems to load but a delay where the first slide should load without showing the first slide, but then seems to work with the second through to the end

This latest issue seems to have trouble loading some pictures in the same folder, with the same resolution settings. Seems to be in both IE and Firefox

Currently the page doesn't contain "ARI Image Slider" module.
