
images slider problem on image-resize

Posted by chea - 2013/06/21 08:52

Hello support team,

I have tried you free image slider with Joomla 2.5.11, it's good.

I have some issues:

1. When adding this module to my page, my menu is unclickable
2. It is not resize the picture to specif setting width & height with responsive option is NO.
3. The right button(navigator) is clickable but right button is moving picture to the left.

kindly help to check the link

Hello,

1. Download and upgrade the module. It should help. (If nothing changes, clean browser's cache).
2. If you want to resize images, you can set "Use thumbnails" parameter to "Yes" and specify new width and/or height using "Thumbnail width" and "Thumbnail height" parameters.
3. What browser do you use?

Regards,
ARI Soft

Thanks so much for fastest your support, Kama.

It really working fine right now. I am using Chrome browser.

I had tried many free slider in my Joomla, but some is add advertising, add much more to show their web or product but you do good, free 100% and very good support, I appreciated so much and high recommended.

But still need more feature from this slider to be a perfect one such as:

- Need a plug-in of this slider. Plug-in is easy to load in any content in desired position.
- Add more navigation thumb to another div bottom of the image.
- More button of navigation, shape, slide transition, slide catteries and more is possible.

Hope you doing your best to be make this slider perfect and be compete to other slider with best price.

Thanks again.
Regards,

=====

You are welcome. Regarding your suggestions:

1. Modules can be loaded in a content with help of "Content - Load Module" standard Joomla! plugin or with help of "Modules Anywhere" or "Module Plant" 3rd party plugins.

2 and 3. We will take these suggestions into account and implement them in a future release.

Regards,

=====
