
No images showing

Posted by justinwells - 2013/06/25 12:43

Hi I have followed your instructions of placing the name of the file containing the images in your image path text area as just 'images' (without the forward slash and with) and the pics are not showing.

please help, thank you

Hello,

Send a link to a page where you try to use the extension and screenshot(s) of module settings page by email.

Regards,
ARI Soft

I wrote that i've try't dfferent path-option. That was incorrect. The last, and most simpel, possibility seme onlogic for me. But it was the right one. Just type "image" was enough.

Hello,

i have the same problem. What part of the path i use in the image path field, i dont see any picture.

The fulle path is: /domains/werkwijzer-oldenzaal.nl/public_html/Werkwijzer/images

What do i wrong?

Thank you for your help. <http://www.ari-soft.com/images/fbfiles/images/path.jpg>

Hello,

"Description" section on module settings page contains instructions how to use the extension. It also contains description how to define path in "Image path" parameter:
