
Slider loading problem

Posted by manav - 2013/08/19 16:04

I have integrated Ari image slider joomla module in my website. Problem is that, it loads an image after all page content loads. Is there any functionality to show loading image at the starting of page load?

Hello,

Set "Load method" parameter to "DOM Ready" in module settings.

Thanks for the quick reply but unfortunately it's already set to 'DOM ready'

can you please visit <http://softwebcms.com/neejanand/index.php>

so you can get the exact situatio.

Thanks in advance.

We don't see the problem. Loading icon is shown and then the first image is loading. When images are loading, the slider starts slide them.

Page loads other page contents first instead of slider. I want to load image slider at the first or to show loading kind of images while images loads by slider.

Download and upgrade the module, set "Load method" parameter to "On load" and clean browser's cache.
