
Questions on images size

Posted by xtrgeo - 2014/01/07 09:26

Hi all,

when having the module as responsive, i adjusts to the size of it's image, right?
Does the width and height options play any reole when responsive is set to yes?

Is there a way, if my images are of different sizes, so the module can "shrink" them or at least adjust their sizes to a specific one?

thnks

Hello,

"Width" is used to specify maximum width when "Responsive" parameter is set to "Yes".

Regards,
ARI Soft
