Shadow botom disappaers

Posted by RdeWaal - 2014/01/25 11:51

_____

Hi,

I installed the Ari Image Slicer in a new website www.janvanegmond.nl. How do I get the shadow at the bottom? Left, right and top are all right but at the bottom the shadow disappears. I tried to solve this problem in resizing the images (original 1060x288 and in the Ari module 1000x228) but even then the shadow at the bottom is gone.
How do I get this shadow at the bottom as well?

Sorry for my bad English. My Dutch is better :)

With kind regards,
Ronald

_____

Hello,

This problem with site template styles. Add the following CSS rule to "CSS Styles" parameter in module settings to fix the problem:

BODY #header {
 overflow: visible;
}

Hello,

Thanks for your very quick answer!
When I add the code in de module (CSS Styles) the code disappaers after saving the new settings . The code is replaced by a '0'.
Do I have to place in a css-sheet of the template?
With kind regards,
Ronald

_____

Check that you use the latest version of the extension (2.1.8).

_____

Hello,

Where do I see which version Iâ€™m using? :(

Never the less, I installed the latest version from your website and.....it works. I put the code 'BODY #header {
 overflow: visible;}' in the CSS Style box and this version did not changed the code in a zero after saving. And the image
shows a shadow at the bottom.
Thanks for your excellent and quick service!

With kind regards,
Ronald
