Independent settings for a few sliders Posted by borro - 2014/05/29 16:56

Hello.

Thank you for your slider. Can you tell is it possible to show a few sliders having independent settings for:

1. delay on start slide show,

2. time to show pictures between two fades or random time of sliding in some limits(e.g. from 1 to 10 seconds) Here is an example which I should repeat with slider. Is it possible with your slider?

Hello,

What is slideshow ck?

Regards, ARI Soft

It is possible to set unique values for module parameters for each module instance.
