
Explanation does not explain.

Posted by Internaut - 2014/10/18 01:14

Hi,

When in the Joom dashboard, and in to the Ari-slider dashboard, under the "Description" tab, about half way down, is the Paragraph header "How to integrate it with lightbox?".

Unfortunately, it does not explain anything on integrating slider with Lightbox. It just lists other available extensions compatible with Slider.

Please provide a link on "How to integrate it with lightbox? or explain here then, how to integrate Slider links with lightbox.

Tnx

Hello,

Install, configure and enable lightbox plugin and then select it in "Lightbox integration" drop-down in "ARI Image Slider" settings page.

"Core Joomla! lightbox" comes by default with Joomla! and if you want to use it, just select it in "Lightbox integration" drop-down.

Tnx. But when I do, and click the image in ImageSlider, it opens a blank web page with the following {edited} url:
http://the website.com/images/slides/?TB_iframe=true&height=500&width=500

And, nothing else.

I am using Ari sexy lightbox the simple ari image slider. The plan is to have a few images slide on the front page, in a small 'position'. On clicking, the image would link to a lightbox of the image in larger proportions, and ability to advance to next/previous withing the lightbox.

That possible?

j

Hello,

If you want to integrate it with "ARI Sexy Lightbox" extension, check that "ARI Sexy Lightbox" module is installed and "System - ARI Sexy Lightbox" plugin is installed, configured and enabled. If it doesn't help, could you provide a link to a page where the problem occurs?

Regards,
ARI Soft

Try now. We set "Load jQuery Method" parameter to "Local copy" value in plugin and module settings.

Where does one "set" the "jQuery Method" for Slider? I'll try anything to get this moving.

The latest version of "ARI Image Slider" module doesn't contain this parameter. The extension detects automatically how to load jQuery.
