oold or lettertype in description .ini file osted by Hadena - 2014/11/01 20:30
li, am using the .ini file (saved as UDF-8) to add descriptions to the pictures. It works, well :) after I figured out that is eeded " " to use a special character like a "!", or a text between brackets.
lowever, is it somehow possible to make part of the description in bold or change the lettertype/size? hanks!

lello,
ou can use HTML code into description. For example:
nage.jpg="This bold text"
