
Images are not resizing - responsive=yes

Posted by mitchel - 2015/02/14 13:15

The first problem was fixed with a module update, I now have the Setting RESPONSIVE available and I checked yes.

The site comes up correctly now on a MOBILE Device but the images on the slider are too big. I can see the slide controls (< >) at the edges, but the images are too wide and are being cut off.

www.familyinchrist.com

In the module the Width is 700 and the Height is 360.

I tried setting the width to 100% but that did not work.

Any advice?

Thanks,

Mitch

The slider looks fine for us. Send a screenshot where we can see the problem and specify what browser(s) you use.

Please try the site on a mobile phone, on my iPhone the images are not resizing and are cut off. See attached image.

The template is "responsive"

We checked it on iPhone (Safari browser, iOS 8.1.2) and Android device (in Google Chrome browser) and the slider is shown fine.

I just cleared my Cache and tried again and it WORKS!!!

I guess the key was to keep the module updated.

You guys are awesome.

Thanks,

Mitch
