
Ari image slider disappear

Posted by armenhov80 - 2015/05/19 21:44

Hi

Now I'm testing ARI Image Slider on my site and I already install module, then set position, publish. After this Module title appears in that position. Image slider apperars only a second after start the page and then disappear.

How solve the problem? And please how can I remove image slider title from page?

Thanks!!!

Hello,

Send a link to a page where the problem occurs.

The slider doesn't contain images. It seems an incorrect path is entered in "Image path" parameter.

Use "Show title" parameter in module settings to show/hide module titles. This is a common parameter for all Joomla! modules.
