
conflict with google recaptcha

Posted by sdfsgdfdsfsgdsf - 2015/10/20 11:35

I noticed that recaptcha is not working on com_users password reset page. It just shows the label 'Captcha *' with nothing else, and submit fails because of a missing captcha. A javascript error made me think maybe a conflict. So when I disable the image-slider, recaptcha works fine. When I enable the slider, the captcha does not show.

Ari image slider 2.1.13
joomla 3.4.4

Hello,

Send a link to a page where the problem occurs.

Regards,
ARI Soft

Set "Load jQuery method" parameter in module settings to "Local copy" value.
