Link to external image

Posted by nick - 2010/07/27 09:01

_____

Is there any extension for displaying images (in a slideshow or popup) from another domain?
Sorry if its the wrong forum

_____

Hello,

In what way do you want to show images from remote server? Is it located in specific folder on remote server or you mean another way?

Regards,
ARI Soft

_____

Actually what I really would like is a way to show images from a coppermine-gallery specifying keywords :)
But IÒ'll settle for specifying a list with image-url's and display them in a slideshow :)

_____

Unfortunately our extensions don't provide possibility to create slide show based on list of images from remote server. Extensions can display images from site folder(s), Flickr and Picasa services. We'll think about implementation of this feature.
