_____

Hello,

Could you specify your problem in more details? Do you have installed 'ARI Image Slider' module, configure it and it doesn't work on your site? Or what problem you have?

BTW, when we try to open your site in a browser, we see standard hosting page, not Joomla! site.

Regards,
ARI Soft

_____

The module shows images from folder(s). If images is located into /images/slides/ folder on your server, set 'Image path' parameter in module settings to "images/slides" (without quotes).

_____

Use standard Joomla! approach for setting module position. Open module settings page and choose necessary position in 'Position:' drop-down:

 http://www.ari-soft.com/images/fbfiles/images/module.png
