Problem with .ini file?
Posted by wildrick - 2016/09/08 11:03
_____

Hi there, having a problem getting the image slider to pay any attention to the ini file of descriptions/links etc.

Slider testing here:

http://www.pokerdeals.com/test

ini file here:

http://www.pokerdeals.com/images/slider2/ariimageslider.ini

 http://www.ari-soft.com/images/fbfiles/images/basic.JPG

Hello,

Check that parse_ini_file PHP function is enabled on your hosting.

Regards,
ARI Soft

Hi again...

responses....

"This was already enabled on the server however was disabled for this website due to the php.ini file in the root directory. I have disabled this override so your website uses the main PHP file."

"OK, great, cheers!
Doesn't seem to have fixed my issues though..."

"I would recommend making sure you don't have any php.ini files in this directory or and directories within the folder you are running the script, if there is then remove these. I can confirm from what i can see though this isn't disabled on the actual server side configuration file."

We can investigate the problem in more details if you provide a temporary access to your J! backend by email.

Regards,
ARI Soft
