
Ari Image Slider

Posted by corcoupe - 2016/09/08 12:36

I installed Ari Image Slider on my website www.dezuidkanter.nl But it will not work. It continues to search, the site is black, it does not do anything.

I installed it on my other site www.corsmit.nu and there it works. How come it will not work on the one site and not on the other? Maybe the problems sits in Joomla jQuery. I like to find it! Can you help me finding it?
