Image slider suddenly missing XML data Posted by bstreiss - 2017/01/04 23:05 It's been a long time since I've done any work in Joomla and this website. Suddenly the image slider is missing and when I go into the plug in I get the error "Module XML data not available". To the best of my knowledge nothing has changed on the website (and yes, the XML data I generated IS still there). Any advice on how to start troubleshooting this? Re:Image slider suddenly missing XML data Posted by admin - 2017/01/05 07:02 Hello, Try to re-install the module. If it doesn't help, we can investigate the problem in more details if you provide a temporary access to your J! backend by email. Regards, ARI Soft Re:Image slider suddenly missing XML data Posted by bstreiss - 2017/01/05 14:54

Thanks, a reinstall seems to have taken care of my problem.
