
Images distorted during effect - Ari Image Slider

Posted by wera - 2017/01/11 07:17

Hello,

I am using the image slider throuout my page and until now the results were great. I think I have more than 10 sliders that look perfect and thank you for that.

Now I wanted to move a slider to the Home page (www.subex.org) and even though I tested it on a different page (<http://www.subex.org/index.php/de/subex/unternehmen/schweizer-qualitaet>) and it displayed normally, suddenly the image distorts during the slide effect.

The pictures all have the same size (750 x350 px) and shrink to 750x250 px) during the effect with detortion.

How can I stop that?

I tried the responsive yes/no and also thumbnail, different effects, number of slices... etc... but nothing changed the problem.

Thanks for your help.

Best regards

Wera

Hello,

This problem with site template styles. Add the following CSS rules to "CSS Styles" parameter in module settings to fix the problem:

```
.article .ari-image-slider img {height:auto;width:auto;padding:0;border-style:none;}
```

Regards,
