## Background Theme- Remove

Posted by innotechmi - 2017/02/03 15:13

---

Hey there everyone. If there is a post on this already, I am sorry. I searched quickly, but my key words may not be right. I just installed this today for use on one of my pages. I want to use it just as an image slider (its not clickable, no thumbnails, etc).

When I add the module into my text (as I intended to do) the module is calling for a theme background as if it was placed on the side of my page. I just want the images sliding without the big orange background.

Can anyone tell me how to get rid of the background that it's calling?

=====

Hello,

Could you provide a link to a page with the slider?

Regards,  
ARI Soft
