
ARI Image Slider Covering Dropdown Menus J 3.6.5

Posted by Mikidudle - 2017/04/15 00:52

Hello,

I found a post about this from May, 2016 for Joomla 2.5 but I need further information
I am running 3.6.5. Those posts recommended that I add the following to the module style.css:

```
BODY #rt-main-surround {z-index:1;position:relative;}
```

I tried this using "add custom css" but it did not work, and has no effect in the module's css, or the templates css.

Where can I change this 'z-index' value so that the slider doesn't cover the dropdown menu?

Joomla 3.6.5 - Protostar template

Hello,

Send a link to a page where the problem occurs.

Regards,
ARI Soft

Hi,

I did find the answer to this issue. It works very well.

```
/* The following css class replaces code in styles.css at:  
root_folder/modules/mod_ariimageslider/mod_ariimageslider/js/themes/default  
It allows dropdown menus to be in front of the slider.*/
```

```
.ari-image-slider-wrapper
```

```
{  
  
margin: 0 auto;  
z-index:1;  
position:relative;  
  
}
```
