
Active bullet color

Posted by nethawk - 2017/06/13 03:09

Hello,

the active bullet has the same color like all unactive bullets.
Any hints ?

<http://pg-boerde.de.xtremeweb.de/>

Thank you

Hello,

It seems your site template adds custom styles for the slider. See the following CSS rule in /templates/joomlage0100-one/css/nexus.css file:

```
.nivo-controlNav a {  
    background: url("../images/slide-bullet.png") no-repeat scroll 0 0 transparent !important;  
    border: 0 none;  
    display: block;  
    float: left;  
    height: 30px;  
    margin-right: 3px;  
    text-indent: -9999px;  
    width: 30px;  
}
```

It uses the same image for all buttons. Active button has "active" CSS class which can be used to change image.

Regards,
ARI Soft

Hello,

it seems renaming .nivo-controlNav in the template css to an unused name shows your (smaller) working bullets.

I will ask the template maintainer about this.

Thank you
