
Clash with EveryWay facebook

Posted by fuzmic - 2017/08/13 11:00

Hi guys

I have posted this issue 1 week ago but it was not clear. I done this testing in my localhost so i can't do what you suggested. But i would still to BELIEVE you can fix this with the info below.

I use all latest version to date

1 Joola 3.7.4

2 Helix3 Template v2.1

3 Your ARI Image Slide v2.2.4

4 Everything in EveryWay FaceBook slider v2.0.13

This is what i found

1 If everyway facebook is on & working, your ImgSlider won't resolve

2 Turn off facebook, your ImgSlider works immediately.

You did mention it is a clash of extension in the jquery, i really hope you guys can fix it with this. THANK YOU.

Hello,

Send a link to a page where the problem occurs.

Regards,
ARI Soft

Sorry it is on localhost, any other way

Or is there any free web host to upload to. I am now tinkering with 000webhost.com
:S

We can investigate the problem when you provide a link to a page where it occurs.

Friends please give me shot in arm by looking at <http://peace.heliohost.org>

You will see the ARI slider not resolving & the menu also missing.

I use all latest version to date
1 Joola 3.7.4
2 Helix3 Template v2.1
3 Your ARI Image Slide v2.2.4
4 Everything in EveryWay FaceBook slider v2.0.13

Thank you first

This problem with ordering of loading javascript files. It loads first combined javascript files (scripts from this file requires jQuery library which should be loaded first) and only then jQuery library:

<http://www.ari-soft.com/images/fbfiles/images/js.jpg>

It looks like a problem with site template javascript optimiser. Try to disable it, clean Joomla! cache and check the page again.

Regards,
ARI Soft

Karma bro

Following your advice I turn off the "compress Javascript" in the Helix template, clear cache and your slider works & so did the menu.

I had a feeling that it has something to do with the template but with my limited knowledge i need your help. THANK YOU.
