
Multiple slideshows on same page

Posted by Jobos - 2017/09/29 12:13

How do I run two slideshows on a single page? I have made the two modules and I have made the single article. In the article I have placed the {loadposition content-article} and this works of one slidshow but what do I put for the second slideshow?

Thanks for any help.

Hello,

You can assign the second module to another module position (you can enter any module position on module settings page) and use "Content - Load Module" plugin to load the module from another position. Something like this:

```
{loadposition position1}  
{loadposition position2}
```

or 3rd party plugins like "Modules Anywhere" or "Module Plant" can be used to embed modules by module id.

Regards,
ARI Soft
