
ARI Image Slider update and Joomla Migration

Posted by filipetorres - 2017/12/06 21:44

Hi,
I'm migrating a website from Joomla 2.5 website to version 3 and I need to update ARI Image Slider module from 2.0.22 to most recent version.
The problem is that the downloadable installation packages are for versions of Joomla 1.5 - 2.5 and for Joomla 3.
How should I proceed to update this module without module data loss and slider continue to work, considering the migration to joomla 3?
Thanks in advance.

Hello,

Just install new version via standard Joomla! installation page after migration. It updates the previous version with the new one and save module configuration.

Regards,
ARI Soft

When the migration has been completed I will post again in this thread to report the results.
Thanks for your support.
