## Problem with the Ari image slider after upgrading

Posted by Mariusz2812 - 2017/12/15 06:45

---

After the Joomla update to 3.8.3, the following message is displayed above the slider:  
Warning: A non-numeric value encountered in  
/xxx/modules/mod\_ariimageslider/mod\_ariimageslider/kernel/class.AriKernel.php on line 16

Hello,

Do you use the latest version of the module (2.2.5)?

no, 2.2.4

:laugh: problem solved

I'm assuming my problem started after upgrading to the latest Joomla version because nobody pointed it out earlier, so I don't know how long the problem has been there - but I'm only guessing as I'd changed nothing else.

But, basically there was a clash between ARI Image Slider and Creative Solutions Contact Form because where these two were on the same page, the page wouldn't load - just hung circling!

I downloaded ARI Image Slider again and re-installed it and the problem disappeared.

My question is - how do I know when I've got the latest version of ARI Image Slider?

I cannot see any version numbers on your product pages or on the "Description" tab of the module.

Please put me right!

Many thanks.

David

To wedontbyte: you can find version of installed extensions on "Extensions -> Manage -> Manage" page.

Hi there,

I'm facing a infinite loading image slider on my site. I had upgraded my Joomla site and sadly the image slider stopped working. I had upgraded the plugin version also (latest version). I don't know what the problem is. I had a plugin called Easy jQuery installed but disabling/enabling hadn't helped yet.

Could you may help me? I'm frustrated.

My site url: <http://moritzm.nue.delivrapp.net/backup/administrator/index.php>.

Best regards,  
Ben.

Hello,

This problem with "artnewsslider" module. It loads jQuery in unsafe way.

Hi there,

thanks alot! It helped, I've just disabled the jQuery loading.

Best regards,  
Ben.
