## Link in the Caption

Posted by renderfreak - 2010/11/02 19:00

---

Hey! Great module!

Would any of you have any idea how we could insert a link into the description caption rather than the image itself??  
(feature available in the original nivo.slider...)

Thanks!

Hello,

HTML code can be used in description. For example if you want to add description with link to Google for image image\_01.jpg, place the following text into INI file:

```
image_01.jpg="Description Google"
```

Thx for the reply!  
When i apply that code i get:

Warning: Error parsing "path.../sliderName.ini" on line 2 in "path.../mod\_ariimageslider/kernel/Utils/class.AppUtils.php on line 34"

Any ideas?

Could you specify what PHP version you use?

Update it to PHP 5 (PHP 4 is no longer supported) or use the following code into INI file:

```
image_01.jpg="Description Google"
```
