## problem with lightbox integration

Posted by tap - 2010/11/16 20:06

---

I got the slider working on my site just fine and was using the joomla core lightbox for awhile. I decided to give sexy lightbox a try. I installed the plugin and enabled it. I changed the lightbox setting in the slider options to use sexy lightbox instead. when previewing my page everything looked like it was working till I clicked on an image. Instead of using lightbox it just opened it in a new tab. I tried to use rokbox and that worked fine but I really dont like it. I went over everything again and again and could not find what could be causing this not work. please help.

Thanks

Hello,

Do you ARI Sexy Lightbox or ARI Sexy Lightbox Lite? The slider can be integrated with "ARI Sexy Lightbox", not with "ARI Sexy Lightbox Lite". If you use "ARI Sexy Lightbox", install "ARI Sexy Lightbox" module and "System - ARI Sexy Lightbox" plugin.

I have the lightbox version. I installed both but I noticed that the plugin didnt install under system but under content in the plugins manager. using the lightbox mod works fine tho.

---

The module can't be integrated with lite version. It can be integrated only with commercial version.
