
A tutorial for ARI image slider?

Posted by ddl - 2010/12/09 13:01

Hi. Is there A tutorial for Ari image slider? specifically I'm interested on explanations on how to add titles to images in the ARI Image Slider. I'm looking for an elaboration on the issue, beyond what is given in the Module page which is: You can also define titles and redirect links for images. For this place INI file with name from 'Description file' parameter in necessary folder with images. Sample INI file you can download here. In section place image file name and title for image in the following format: =. Where is image file name and is image title. In section place image file name and link for image in the following format: =. Where is image file name and is image title. If you use non-english characters in INI file, save this file in UTF-8 encoding.

Thanks for any help.

Hello,

You can find information how to use the module in 'Description' field on module settings page. It also contain link to sample of INI file with descriptions and redirect links. For example if you want to load images from /images/slides/ folder and this folder contains photo01.jpg and photo02.jpg files and you want to define descriptions and redirect links for these files, set "Image path" parameter to "images/slides", create ariimageslider.ini file with the following content:

```
photo01.jpg="Photo 01"  
photo02.jpg="Photo 02"
```

```
photo01.jpg="http://www.google.com"  
photo02.jpg="http://www.ari-soft.com"
```

and place this file to /images/slides/ folder.

Regards,
ARI Soft

Thank you very much.
It looks very clear. just a question regarding the Link section of the ini file:

```
photo01.jpg="www.google.com"  
photo02.jpg="www.ari-soft.com"
```

considering the above examples of web-links, should the link simply refer just to the domain name of my website , which is my homepage, or a more elaborate web path is necessary

Thanks for any help

You are welcome. It's just a sample, you can use any links which you want. For example you can use the following link:

```
photo01.jpg="http://www.ari-soft.com/Joomla-Components/ARI-Quiz/Detailed-product-flyer.html"
```

or if you want to use relative link to your site, you can enter it in the following way:

photo01.jpg="Joomla-Components/ARI-Quiz/Detailed-product-flyer.html"

Jumping on to this I have the following file in file

01-goodluckr.jpg="http://www.google.com"

That corresponds to a picture in the images folder.

When the user clicks that picture a small window opens but doesn't open the page?

the site is www.prentonhighschool.co.uk in case anyone wanted to look!

Thanks

Hello,

I add the description in the ariimageslider.ini with following:

```
ocean.jpg="Photo 01"  
rainbow.jpg="Photo 02"
```

```
ocean.jpg="www.google.com"  
rainbow.jpg="www.ari-soft.com"
```

I can see the image but no link and description...
Is there something wrong?

Thanks for help.

Is there a way of getting around the .ini file? I am using Joomla 1.5 and that version does not recognize the .ini file.

I would like to utilize the "default link" option but I have 4 slides that need links.

I am testing the slides here:

<http://www.acluxe.com/home/index.php/joomla-overview/fashion/glitter-and-garb>

Thanks =)

The page doesn't contain "ARI Image Slider" module. Provide also the link to INI file.

The Ari Image Slider is live now (I unpublished for a few moments).

I tried to upload the ini file to the images/slides folder I created but I got an error message stating that this type of file is not supported.

If you use Joomla! 1.5, upload INI file using a file manager extension like eXtplorer or use a file manager in hosting panel or upload it via FTP.

Hmm i have set in module manager image path images/ari
directory images is in the top of joomla
Description.ini

```
sleen.jpg="sleen"  
sleen3.jpg="sleen3"
```

```
sleen.jpg="images/ari/sleen.jpg"  
sleen3.jpg="images/ari/sleen3.jpg"
```

No slider! even when i remove everything from
The files in de directory are sleen.jpg and sleen3.jpg

Oh no, the site is just testing and i have it local on my mac I have
MAMP/htdocs/images/ari

In folder /ari there are 2 pictures sleen.jpg and sleen3.jpg.

I just installed joomspirit18 template

I even tried it on /htdocs/templates/joomspirit_18/images/ari

Thank you for this information. Very helpful! I just have one issue. I am not able to update the ini file with the updated link information. I receive an error "This file type is not supported." in the media manager.

Any help really appreciated.

Thanks a bunch in advance.

If you want to upload INI files via Joomla! media manager, click by "Options" button on media manager page and add ini file extension to "Component -> Legal Extensions (File Types)" parameter.

Re:A tutorial for ARI image slider?

Posted by Mogwai - 2017/02/10 15:47

Hi,

I know this is an old thread but I just bought 2 modules and also want to use the ARI cloud carousel. I wonder how the ini file should look like when I have a 2 language page and for both languages the description and link is different. Can I save 2 ini files into the same photo directory?? :silly:

Thanks in advance for any help!

Kind regards,
Mogwai

Edit: found explanation - thank you!

Re:A tutorial for ARI image slider?

Posted by admin - 2017/02/10 20:12

Hello,

Add a language code to file name. For example:

ariimageslider.en-GB.ini
ariimageslider.fr-FR.ini

Regards,
ARI Soft
