
SOLVED: Slider Layering...

Posted by mechgr - 2010/12/09 13:28

thanks for this excellent component :cheer: simple, easy to setup... i have a question: is there a way to fix a layering issue??? i have a dropdown menu that appears right on the slider, and if the menu is open and the image changes then the menu disappears behind the menu...

is there a fix for this??

Thanx

Hello,

Provide link to page where we can see this issue that we can investigate this problem.

Regards,
ARI Soft

Sorry, but screenshot can't help. It can be a problem with site template styles. If you can upload your site to online server, we can investigate this issue and try to help.

ok the solution was actually quite easy... i just changed the z-index value in nivo-slider.css line 36 for the slices... the menu stays on top of the slider...!!

thanks !
