## Using plugin rokbox

Posted by carosouza - 2011/01/06 21:09

---

Hello, congratulations on the module that is very useful and great features. I'm using the plugin Rokbox 2.3. When you open an image, I wish he would show me the others, but to open it only displays the image clicked. Is to see the other images as is used with your plugin?. Thanks.

Hello,

Thank you for good words. Download and upgrade "ARI Image Slider" module. New version provides better support of RokBox plugin.

Regards,  
ARI Soft

Hello, Ari Softs, not only the extensions are wonderful, as your ability to solve problems, Note 1000. If I could buy all your extensions, because they are worth. They are efficient, but unfortunately I live in Brazil, and things here are hard. You hit the target. Just a detail, how to make the next picture, do not be giving that little jump to the next image? Stay still and you will only going to the next. In most ARI, much success in 2011, many customers do you, you deserve it! Cheers.

ARI Hello, I solved the problem by analyzing the css. Just added:  
#rokbox-wrapper {top: 0px! important;} resolved.

Thanks ARI
