
ARI Carousel - positioning of module in article

Posted by boobid - 2011/02/13 13:24

Hello guys, super extension but how can I bring the gallerie up to the top of the page. I would also like to have multiple galleries in one article and at the moment, they have a lot of space between them? I am a bit new with this stuff. Any help would be greatly appreciated. Thanks

Hello,

Could you provide link to page where we can see this problem?

Regards,
ARI Soft

You can set "Height" parameter to "400" and "Y radius" to "180" or find more appropriate "Height" and "Y radius" values of these parameters for your case. If "Y radius" and / or "Y pos" parameters are not defined, the module calculates them by the next formulas:

"Y radius" = "Height" / 6

"Y pos" = "Height" / 3

but these values can be overridden if enter them manually in module settings.
