

carousel: relative path to background image

Posted by eropuitinbrabant - 2011/02/23 16:43

the relative path to the background image is not working when directing to a main and a subdirectory. the full path has to be used instead. I tried making a copy of the cloud carousel and directing one carousel to the main path and the other carousel to the subdirectories, but that didn't work. So I tried to use the full path, including http:// and then it worked. see attachments http://www.ari-soft.com/images/fbfiles/images/background_image01.jpg

Is core Joomla! SEF enabled?

Could you open HTML source of page with carousel and send value of HTML tag?

PS: Screenshots can't help to resolve the issue.

to me it's not a problem anymore, because I found a workaround by using the full path. but if the solution can be integrated into the module itself, maybe you update it and people after me who download it from your site won't have the same problem. if you want to send me an email, please to [info@ "my username".nl](mailto:info@myusername.nl)

Thank you. got your email. unfortunately the plugin doesn't fix the problem with the path. tried it, but still have to use the full path in order to see the background image in the subdirectories.
