Altering aricloudcarousel.ini
Posted by krentzis - 2011/03/04 09:58

_____

Hello,

I installed the carousel and it is working fine. It is showing the thumbs and I can display large images if I choose to.

The problem I am having is that I have the Greek language as default and I have renamed the aricloudcarousel.ini file toaricloudcarousel.el-GR.ini (also tried aricloudcarousel.el-EL.ini)

the contents of the .ini file is:

baseis-tourtas.png="Bread"
cafeterias.png="Coffee"

baseis-tourtas.png="This is a bread"
coffee.jpg="A cup of coffee"

baseis-tourtas.png="http://www.google.com"

I dont see any titles or description and the link to google is not working either.

Also I have enabled support for multi-languages in the carousel's module.

can you please advice.

thanks

_____

Hello,

Is it possible to provide temporary access to your Joomla! backend by email and say link to page where the carousel is used that we can investigate this issue?

Regards,
ARI Soft

_____

Could you create site backup with help Akeeba Backup extension and send it to us that we can investigate the issue on our test server?

Regards,
ARI Soft

_____

Try now please. INI file should be located in image folder, not in module folder.

Regards,
ARI Soft
