
Bring to front and URL links

Posted by rjestudio - 2011/03/05 20:20

Hi there,

thanks and congratulations for your great work.

It looks like if I combine options "Bring to front" and URL links in the INI file, carousel makes both things, brings the item to front and open a new window.

I would like to have my carousel with the option to bring to front an image and then (and only then) open the URL if clicked again

So, lets say, only the image in front can open the URL.

Is this possible?

Thanks again.

Hello,

Download and upgrade "ARI Cloud Carousel" module. New version contains new parameter "Open only active item", set this parameter to "Yes" that open carousel links only for active item.

Regards,
ARI Soft

It worked smoothly.

Thank you very much!

Bring to front option of Ari Cloud Carousel

Posted by aqeeq - 2012/05/22 12:41

I have a question from Admin, i am utilizing Ari Cloud Carousel, its working fine but i want to have images like this:-

when image rotates and comes at front , it should be bigger or you can say in large view till it stay it front,i think it relates with the Bring to front option but i don't understand how to modify or change the script or style for this option. i just want image to large when it come at bringtofront place, when it rotate further may be in normal size.

I shall be so thankful to you Admin for your guidance.

Best Regards

Hello,

We can provide original javascript file which is used by the module and you can modify it for your needs.

ok thanks alot for your co-operation but i also need instructions regarding this jquery file how to amend it as per my need and at which section, and how can i add it to my existing Ari Cloud Carousel module.

waiting for your response.

Best Regards

A.R.Kazmi
