
Is there a plug-in version of your module?

Posted by keatby - 2011/05/06 11:05

Hi

I've placed the 'ARI Cloud Carousel' module within an article using the 'loadposition' technique. However, I have 8 pages with 8 different galleries. So using the module as is, I would have to duplicate it 8 times and alter the module's path parameter for each gallery path.

If you have a plug-in version, I would only need one plug-in, and I guess I'd be able to type in each gallery article {name of plug-in}path{/name of plug-in}

I've search your forum and online, but there doesn't seem to be a publicly available plug-in version of your 'ARI Cloud Carousel' for 'Joomla!'. Can you provide me a version if it exists?

Thanks in advance.

Kind regards

=====

Hello,

You can configure "ARI Cloud Carousel" module and use Modules Anywhere plugin that load this module with overriding "Image path" parameter. For example if "ARI Cloud Carousel" module ID equals to 45 and you want to set "Image path" parameter to "photo/album1", the code will look like:

```
{module 45|path=photo/album1}
```

Regards,
ARI Soft
