## Issue using Core Joomla Lightbox

Posted by djburner - 2011/05/25 05:52

---

Hi you all, this mod is just amazing. Thanks for the great work.

I'm using the core joomla lightbox but the images resize to 70-80% of their full sizes. In my `template.css` I can change color and borders and such of the Core lightbox, but How could I set the core lightbox to automatic maximize the images to their full size?

DIV#sbox-window

```
{  
  background-color: 000;  
  padding: 5px;  
}
```

Thanks for any help on this one.

Greetings

=====

Hello,

Joomla! is used SqueezeBox MooTools lightbox script. It is a simple lightbox and doesn't support ability to maximize images.
