delete nav buttons completely / CSS

Posted by Janna - 2011/05/26 03:59

_____

Hey guys,

first of all; This is one of the best joomla modules I've ever seen.
I tried so many for a slideshow, but nothing did work, like I wanted. Now I'm quite happy with this one! Thanks. :-)

I've just one question.
I don't need to display the buttons for navigation, so I disabled them. That's fine.
But now there is space where the buttons were befor. I guess disabling the buttons just doesn't show them anymore.
I'd like to delete the buttons completely, I think, I have to change something in the CSS.

I'll add a picture to make it more clear;
the red box is where the buttons for navigation were and I want to delete this space and put the whole thing up, like the
arrow shows.

If someone could tell me what I have to change in the CSS file, would be really great!

Thanks in advance for your help!
:-)

_____

Hello,

You can play with "Radius X" and "Radius Y" parameter. Read more about it here.

Regards,
ARI Soft
