## custom target for image links

Posted by thiagob - 2011/08/28 15:11

---

First: thank you for this awesome and well done extension.

I have a question: is it possible to use another target besides "new window", "self window", "parent winndow" or "top window"?

Let's say I have a wrapper (iframe) set with target named "content", how can I have the image links to be open on this wrapper?

Thanks in advance.

Hello,

Download and upgrade the module. New version contains new parameter called "Custom link target". Use it to specify custom target.

Regards,  
ARI Soft
